

Trial Match Report

NCT ID: NCT02477839

PATIENT	
MRN	1036
Gender	Female
Vital Status	Alive
Diagnosis	Non-Small Cell Lung Cancer
TMB*	4.1

Primary Trial Match

TRIAL OPEN		MATCH DETAIL		GENOMIC MATCH DETAIL	
Trial Name	EGFR-TKI Resistance Combination Study	Cancer Type Match	specific	Gene	EGFR
NCT ID	NCT02477839	Reason Type	genomic	Protein Change	p.L858G
Protocol No.	NCT02477839	Match Type	gene	cDNA Change	c.2572T>G
Trial Therapy	Osimertinib + MET inhibitor add-on	Age Eligibility	18–75 years	Variant Classification	Missense_Mutation
Trial Source	Regional	ECOG Status	0–2	Variant Category	MUTATION
Match Level	step	Location	Ann Arbor, MI	Allele Fraction	0.29
Match Engine	MatchMiner-v2			Tier	2
				Chromosome	7
				Position	55259515
				Reference Allele	T

Regional Trial Matches

NCT02477839

ClinicalTrials.gov Matches MAY BE OUTDATED

Verify current enrollment status directly with the sponsoring institution before referral.

NCT05112233
NCT02871234

Extended Patient Data

Potentially relevant other information

ECOG Performance Status	1
Prior Lines of Therapy	2 (osimertinib, carboplatin/pemetrexed)
Smoking History	Former smoker, 15 pack-years
Brain Metastases	None observed
Most Recent Imaging	CT chest/abdomen/pelvis, 2026-05-02 — stable disease

Methods

Trial matches are generated by MatchMiner, an open-source precision oncology clinical trial matching platform developed at Dana-Farber Cancer Institute. Patient clinical attributes — including primary diagnosis, vital status, and tumor mutational burden — along with genomic alterations are systematically queried against a curated database of clinical trials encoded in Clinical Trial Markup Language (CTML). Each trial's eligibility criteria, including required genomic alterations, cancer type specificity, and clinical parameters, are evaluated against the patient's molecular and clinical profile. Matches are ranked by specificity: exact cancer type matches are prioritized over broader pan-cancer genomic matches.

Regional institutional trials are sourced directly from participating sites and reflect near-real-time enrollment status. ClinicalTrials.gov entries are synchronized periodically and may lag behind current enrollment or protocol amendments. Match Scores reflect the degree of alignment between patient attributes and trial eligibility criteria as assessed by the MatchMiner algorithm and should be interpreted in that context.

For clinical decision-support only. All matches require independent clinician review before any clinical action or patient communication. Trial availability and eligibility criteria are subject to change; verify current status directly with the sponsoring institution.

Abbreviations

TMB	Tumor Mutational Burden — number of somatic mutations per megabase (mut/Mb) of tumor genome sequenced
NCT	National Clinical Trial identifier (ClinicalTrials.gov registry number)
ECOG	Eastern Cooperative Oncology Group performance status scale (0 = fully active, 5 = deceased)
MRN	Medical Record Number
